

Question and Answer, May 24, 2023:

- 1) According to Paragraph 2.2 Shipping Container(s) of the LOGISTICS PLAN, the weight of the Camera Shipping Container is 7,950 kgs. Yet, the Crate BOM document shows it weighs 9,500 kgs. Which number is accurate?

The logistics plan is more current and closer to the real value than the Crate BOM document with respect to the container weights. The Camera Shipping Container total weight was last measured at 8020 kg (including the container itself, confirmed two weeks ago during a test drive).

- 2) Do you know the weights of the other two 20ft containers?

We do not yet know the weights of the other two containers, but they will likely be similar to the Camera Shipping Container weight.
